Data Analysis Expressions

- DAX: Data Analysis eXpressions
- Used in Microsoft applications
- Create calculations and measures
- 200+ functions in DAX
 - <https://learn.microsoft.com/en-us/dax/>

¹ <https://learn.microsoft.com/en-us/dax/dax-overview>

Syntax of DAX

```
MeasureName:=SUM(Table1[Column])
```

Syntax of DAX

```
MeasureName:=SUM(Table1[Column])
```

Syntax of DAX

```
MeasureName:=SUM(Table1[Column])
```

Syntax of DAX

MeasureName:=**SUM**(Table1[Column])

Syntax of DAX

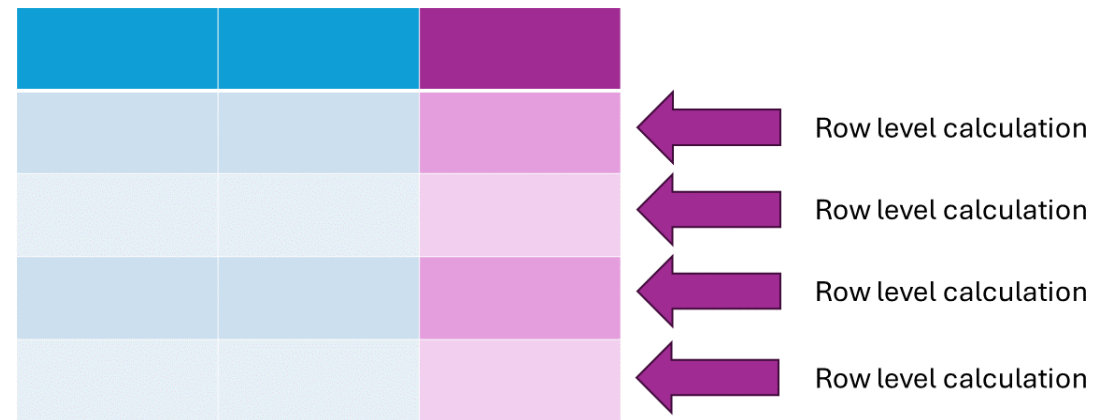

MeasureName:=**SUM**(Table1[Column])

Syntax of DAX

MeasureName:=**SUM**(Table1[Column])

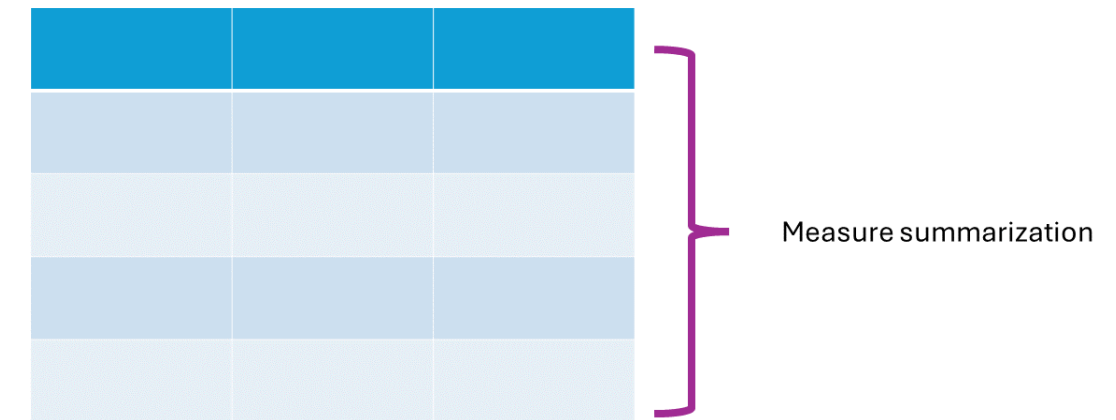

Calculated columns vs measures

Columns

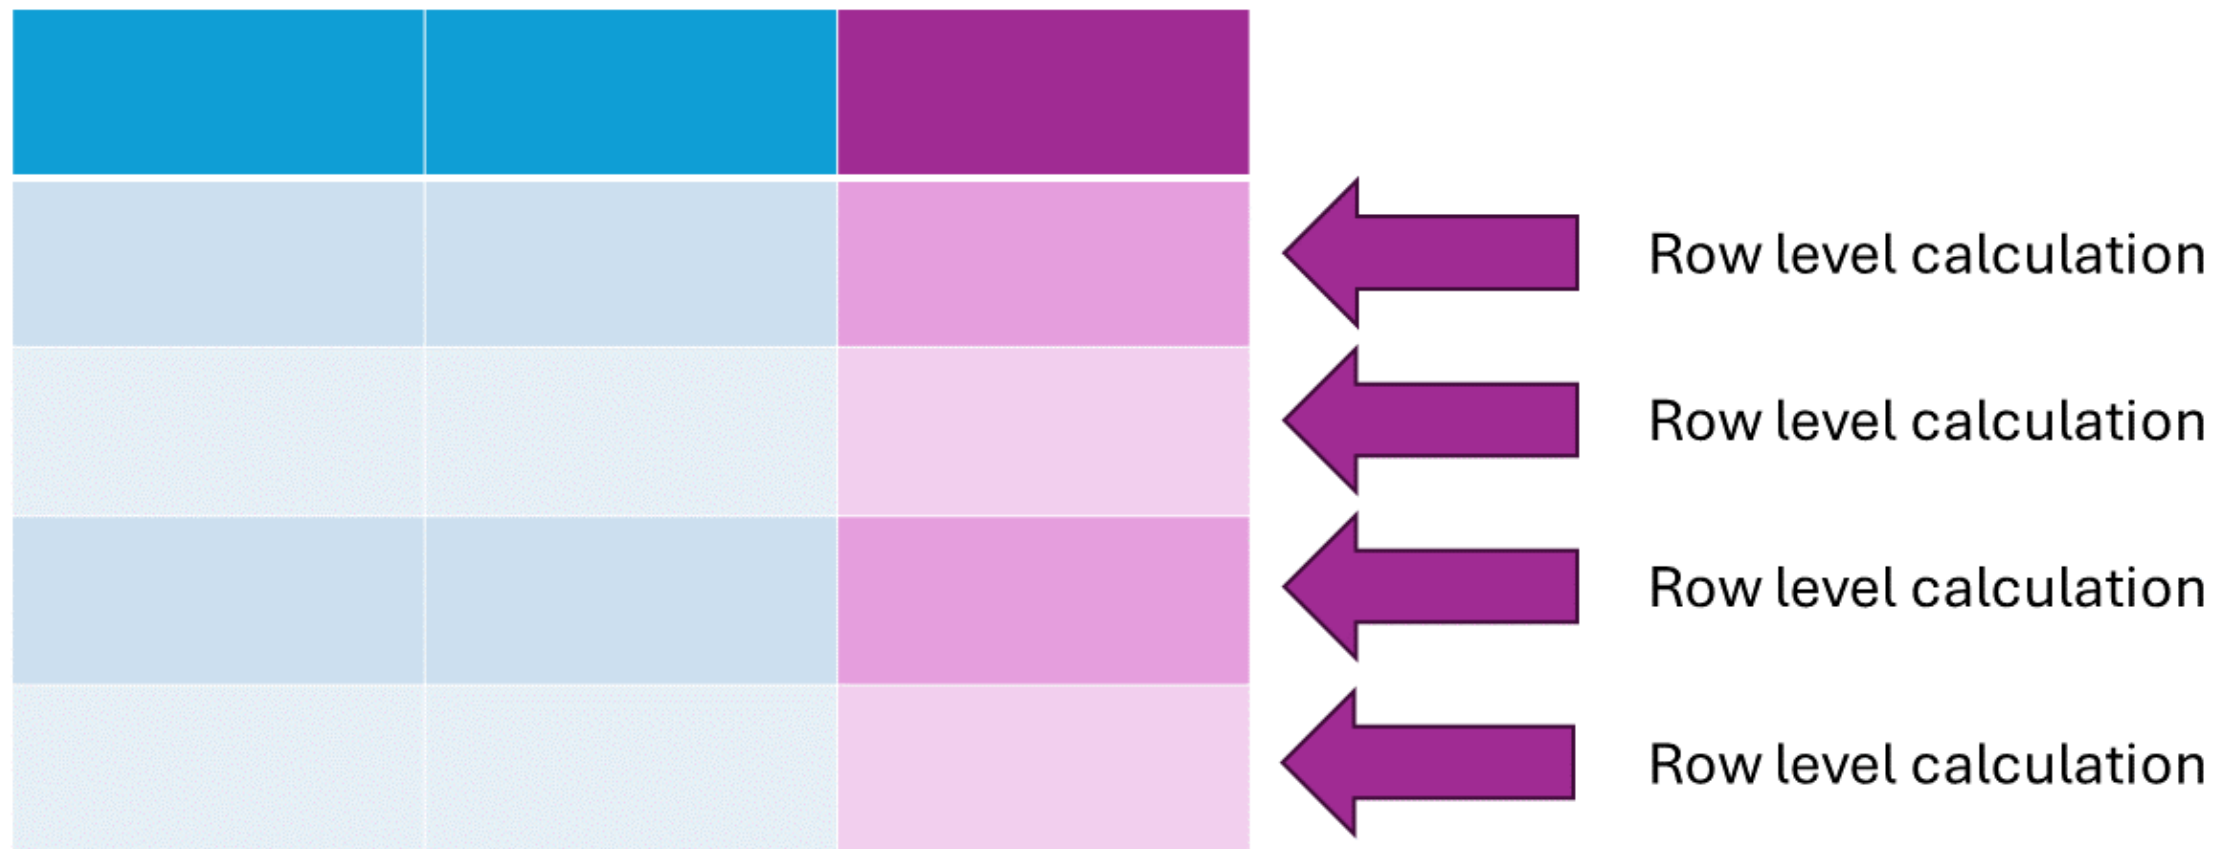

- Evaluated at the row level
- Adds a new column to an existing table
- Calculated at data load

Measures

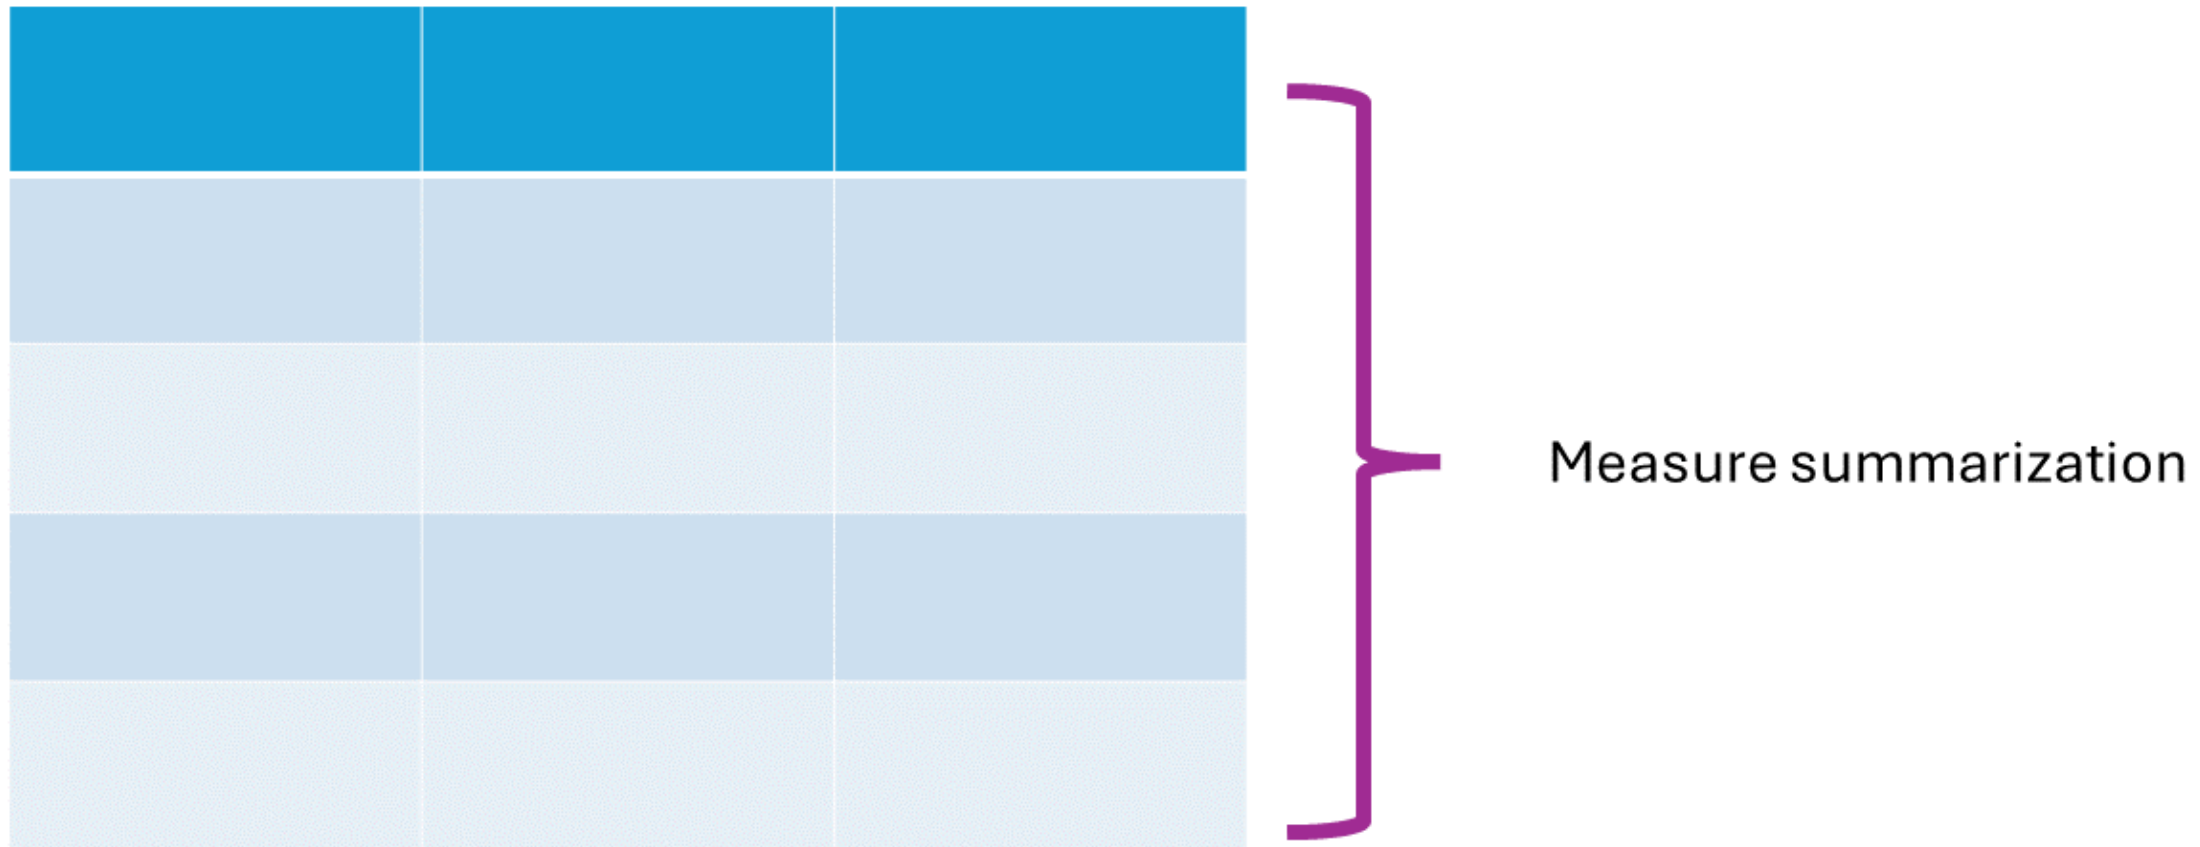

- Aggregates many rows
- Adds a field, not a column, that can be visualized
- Calculated at query time

Row context

Row context

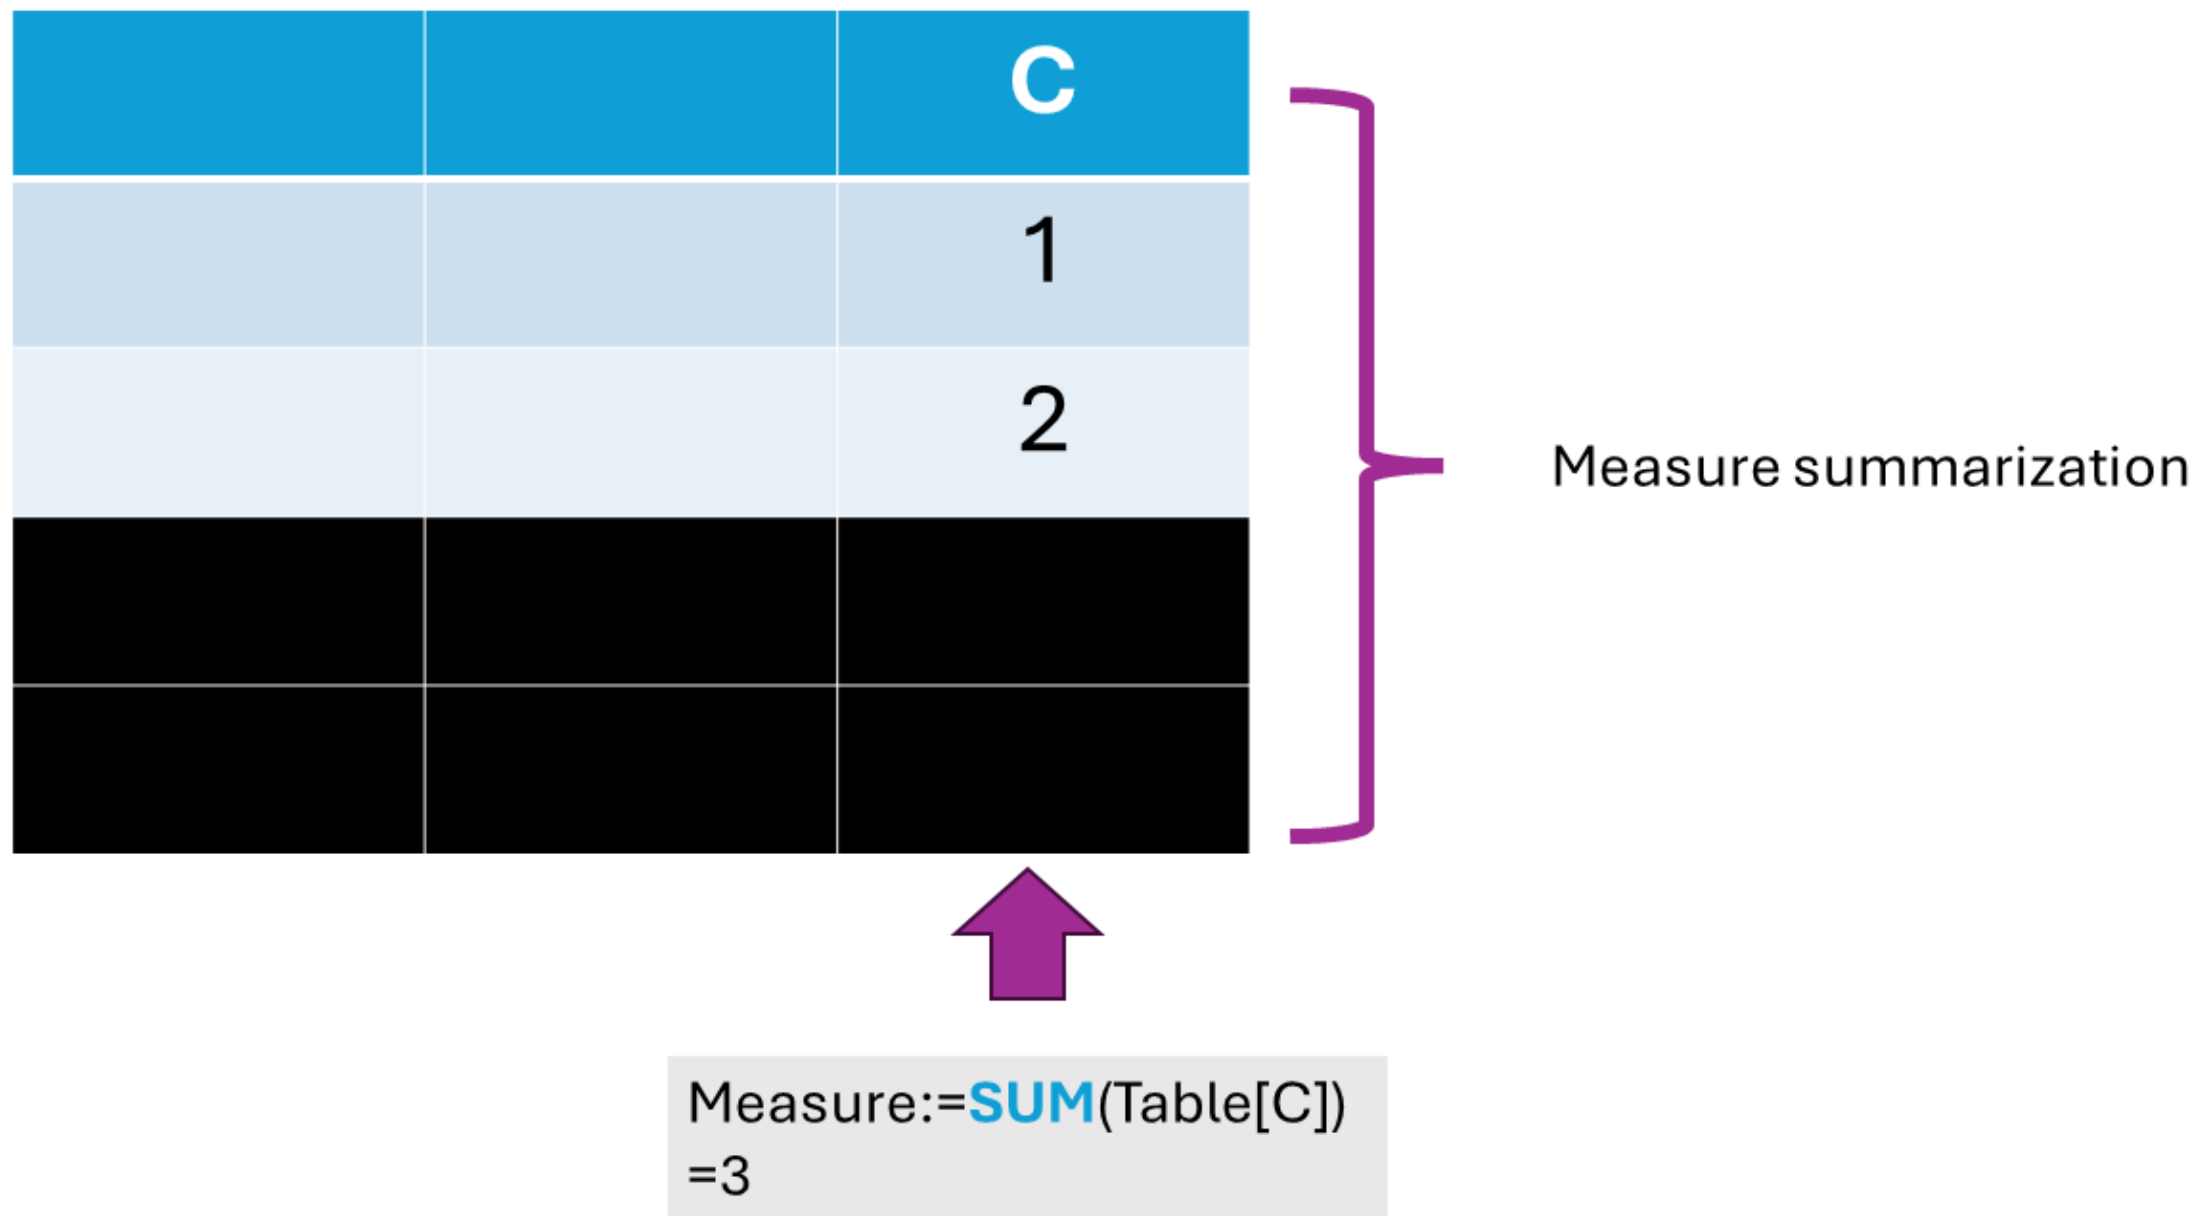

Row context

		C
		1
		2
		3
		4

Measure summarization

Measure:=SUM(Table[C])
=10

Filter context
